EDUCATION

Manuel S. Enverga University Foundation | Lucena City, Philippines

May 2027

Bachelor of Science in Computer Science Major in Software Engineering

- **Relevant Courses:** Programming Languages, Data Structures & Algorithms, Object-Oriented Programming, Database Management Systems, Software Engineering
- **Honors & Scholarships:** Dean's Lister, University Scholar, DOST-SEI Scholar

TECHNICAL & RESEARCH PROJECTS

KILATIS | Digital Image Forensics Framework

January 2026 - Present

Thesis Project

- Built a dual-branch deep learning forensic framework using PyTorch, TruFor-based Transformers, and FFT/DWT analysis to detect AI-generated / deepfakes and generate pixel-level tampering heatmaps for traditional splices.
- Engineered a cross-platform forensic suite using FastAPI, Next.js 16, and Tauri v2, integrating SHA-256 hashing, EXIF parsing, and automated PDF report generation.

Ephnyr AI | Full-Stack Multi-Tenant RAG Platform

August 2026

AI & System Architecture

- Architected a decoupled client-server RAG platform utilizing LangChain chunking, local CPU-generated 384-dimensional dense vectors and PostgreSQL pgvector HNSW indexing for high-precision semantic document similarity search.
- Integrated Groq LPU inference using openai/gpt-oss-20b to deliver AI chat completions with document citations, enforced by a zero-trace ephemeral session model and room-level storage quotas.

FocusFolio | AI Study Workspace & Document Quiz Generator

July 2026

EdTech & AI Platform

- Engineered document processing pipelines using Pinecone and LangChain to dynamically generate interactive multiple-choice quizzes and comprehensive flashcards from uploaded course files.
- Built a context-restricted RAG study workspace featuring a side-by-side native PDF reader and an AI tutor strictly constrained to source materials to reduce hallucinations.

CheckMatePH | Political Fact-Checking & Civic Engagement Platform

May 2026

SIKAPTala 2026 Hackathon | Top 10 Finalist (7th Place)

- Developed a systematic AI-driven fact-checking pipeline evaluating submitted claims against verified public records to combat online misinformation for Filipino voters.
- Implemented real-time interactive debate rooms and live audience voting using Supabase Realtime, alongside politician integrity scorecards and role-based permissions.

LEADERSHIP EXPERIENCE

MSEUF Association of Multimedia Artists and Technologists

4th Year Representative | BSCS

July 2026 - Present

3rd Year Representative | BSCS

July 2025 - May 2026

- Acted as the primary representative between CS students and executive officers, communicating academic concerns and coordinating department-wide technical activities.

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript

Frameworks & Libraries: React, Next.js, FastAPI, Node.js, Tailwind CSS, LangChain

Databases & Backend: Supabase, Firebase, PostgreSQL, RESTful APIs

Developer Tools: Git, GitHub, Docker, Postman, CI/CD basics
